

Risolvere le seguenti equazioni differenziali:

$$1. \quad y' - y = e^{2x}$$

Risposta: $y = e^x(c + e^x)$

$$2. \quad y' - \frac{3}{x}y = x^3\sqrt{x}$$

Risposta: $y = x^3 \left(c + \frac{2\sqrt{x^3}}{3} \right)$

$$3. \quad y' - 2xy = e^{x^2} \operatorname{tg} x$$

Risposta: $y = e^{x^2}(c - \log |\cos x|)$

$$4. \quad y' - \frac{y}{\operatorname{tg} x} = \operatorname{sen} x \log x$$

Risposta: $y = \operatorname{sen} x(c + x \log x - x)$

$$5. \quad y' - y \cos x = \sqrt{x} e^{\operatorname{sen} x}$$

Risposta: $y = e^{\operatorname{sen} x} \left(c + \frac{2\sqrt{x^3}}{3} \right)$

$$6. \quad y' + y \operatorname{tg} x = \operatorname{arctg} x \cos x$$

Risposta: $y = \cos x \left(c + x \operatorname{arctg} x - \frac{1}{2} \log(1 + x^2) \right)$

$$7. \quad y' + y \operatorname{sen} x = e^{x+\cos x}$$

Risposta: $y = e^{\cos x}(c + e^x)$

$$8. \quad y' - \frac{y}{(1+x^2)\operatorname{arctg} x} = \frac{x \operatorname{arctg} x}{1+x^2}$$

Risposta: $y = \operatorname{arctg} x \left(c + \frac{1}{2} \log(1 + x^2) \right)$

$$9. \quad y' - \frac{y}{\cos^2 x} = e^{\operatorname{tg} x} \operatorname{tg} x$$

Risposta: $y = e^{\operatorname{tg} x}(c - \log |\cos x|)$

$$10. \quad y' - \frac{y}{x \log x} = \sqrt{x} \log x$$

Risposta: $y = \log x \left(c + \frac{2\sqrt{x^3}}{3} \right)$
