

# Measuring the Network

[www.ict.csiro.au](http://www.ict.csiro.au)

## Agenda

1. Introduction
2. bwctl and owamp

is supported by the Australian Government through the Advanced Networks Program (ANP) of the Department of Communications, Information Technology and the Arts

# Measuring the Network

[www.ict.csiro.au](http://www.ict.csiro.au)

## Agenda

1. Introduction
2. bwctl and owamp

is supported by the Australian Government through the Advanced Networks Program (ANP) of the Department of Communications, Information Technology and the Arts

## Measuring the Network: Definition of Network Performance

[www.ict.csiro.au](http://www.ict.csiro.au)

- **Functional definition of network performance**
  - speed of the network
  - latency
  - jitter
  - packet corruption

is supported by the Australian Government through the Advanced Networks Program (ANP) of the Department of Communications, Information Technology and the Arts

## Measuring the Network: Types of Measurement

[www.ict.csiro.au](http://www.ict.csiro.au)

- **Passive Measurements**
  - Measure and monitor the quality of the service offered
- **Active Measurements**
  - ping and traceroute
  - bwctl (Iperf) and owamp

is supported by the Australian Government through the Advanced Networks Program (ANP) of the Department of Communications, Information Technology and the Arts

# Measuring the Network

www.ict.csiro.au

## Agenda

1. Introduction
2. bwctl and owamp

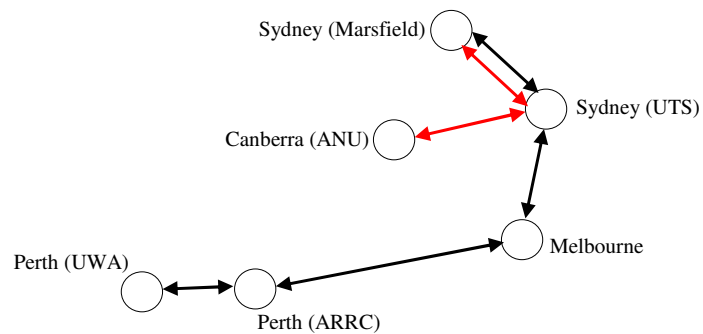

is supported by the Australian Government through the Advanced Networks Program (ANP) of the Department of Communications, Information Technology and the Arts

# Measuring the Network: Active Measurements

### bwctl – typical scenario

CeNTIE2

is supported by the Australian Government through the Advanced Networks Program (ANP) of the Department of Communications, Information Technology and the Arts

## Measuring the Network: Active Measurements

www.ict.csiro.au

### bwctl

- The following slides show some results obtained using the [bwctl](#) software.
- All measurements were made by requesting udp transfers at 90 Mbps between two hosts.
- To avoid beating effects and to minimise the impact of these measurements on the network, they were carried out for 30 seconds approximately once an hour.
- A page of “normal” results is shown [here](#).

CeNTIE2

## One-Way Measurements - OWAMP

### How it works

- The protocol expects that probe senders and probe receivers using synchronized clocks be deployed – the daemon *owampd*.
- The sender records the precise time a probe packet was transmitted into the network.
- The receiver records the precise time that same packet arrived at the receiver.
- The difference in these times gives the measurement.

is supported by the Australian Government through the Advanced Networks Program (ANP) of the Department of Communications, Information Technology and the Arts

## One-Way Measurements – OWAMP example

```
./owping 172.20.4.118
--- owping statistics from [kryten.mgmt.CeNTIE.NET.AU]:1123 to [orac.mgmt.CeNTIE.NET.AU]:2235 -
...
SID: ac140476c65b85970333b96a3d046775
100 packets transmitted, 0 packets lost (0.0% loss)
one-way delay min/median = -139.999/-138.000 ms (precision 0.14087 s)
no reordering

--- owping statistics from [orac.mgmt.CeNTIE.NET.AU]:3689 to [kryten.mgmt.CeNTIE.NET.AU]:1124 -
...
SID: ac14043dc65b8596ef55ffe6b552988a
100 packets transmitted, 0 packets lost (0.0% loss)
one-way delay min/median = 193.338/194.000 ms (precision 0.14087 s)
no reordering

PING 172.20.4.118 (172.20.4.118): 56 data bytes

--- 172.20.4.118 ping statistics ---
100 packets transmitted, 100 packets received, 0% packet loss
round-trip min/avg/max/stddev = 54.328/54.418/54.560/0.051 m
```

## One-Way Measurements – ntp time variation

Supplied by Bruce Warrington of the Time and Frequency Division of the National Measurement Institute.

is supported by the Australian Government through the Advanced Networks Program (ANP) of the Department of Communications, Information Technology and the Arts

## Measuring the Network: Active Measurements

www.ict.csiro.au

### One-Way Measurements – OWAMP working

- Is there anything that can be done?
- Use stratum 1 servers to create two stratum 2 servers on the network.
- Use these stratum 2 servers exclusively to set the time inside the CeNTIE network.
- Much improved results obtained to the extremities of the network.
  - orac → artemis  $25.6 \pm 1.2$
  - artemis → orac  $29.1 \pm 1.2$
  - artemis ↔ orac  $54.7 \pm 2.4$
  - ping mean artemis ↔ orac 54.6
