#### @ Linux Day 2013: Monitoring Internet Censorship

## Internet Censorship

## Agenda

- Part I
  - Some Example
  - Introduction to Internet Censorship
  - Censorship @ work
  - Monitoring Internet Censorship
  - Our Contribution
  - Open Questions
  - Conclusion
- Part II
  - UBICA, User-Based Internet Censorship Analysis

# Some Example

## Example: Site Blocked

🕒 Site Blocked אוגספֿא מ-בוועס א 🗲	Google 👝 🗖 🗙
← → C ☆ http://bahrainonline.org/	
Dear User,	عزيزي المستخدم،
Site Blocked	الموقع محظور
This web site has been blocked by the order of the Ministry of Culture and Information based on Article 19 of Decree Law No. 47, 2002 regarding the organization of the press, printing and publishing in the Kingdom of Bahrain due to the publication of prohibited content on the aforementioned site.	تم حجب هذا الموقع بقرار من وزارة الثقافة والإعلام استناداً إلى المادة (١٩) من المرسوم بقانون رقم (٤٧) لسنة ٢٠٠٢م بشأن تنظيم الصحافة والطباعة والنشر بمملكة البحرين وذلك لاحتوائه على أمور محظور نشرها طبقاً للقانون.

## Example: TOM Skype

- Different Versions Censor Differently
- Censor and Surveillance / Surveillance Only

### Example: Google Search (3/3)

- Imagine having to do research on the Tiananmen Square Massacre for history homework and you are only able to access bias information that the government allows you to read.
- Isn't this a really bad research?
- Isn't this a violation of your rights and the violation of the internet freedom?
- The universal declaration of Human Rights say "human beings shall enjoy freedom of speech..."

# Introduction

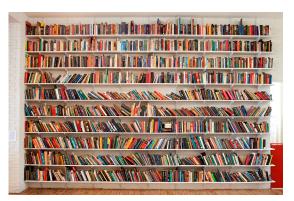

## Censorship: Introduction

- Startling growth in short time
- Change in source of information
  - from libraries, books to internet
  - boom in individual contribution

(book needs much investment, but internet not)

#### Increase in individual inclusion

- disclosure of ideologies, creativities, documents which leads to virtual pollution
- Intervention of authorities by censorship
  - nature of censorship varies acc. to states

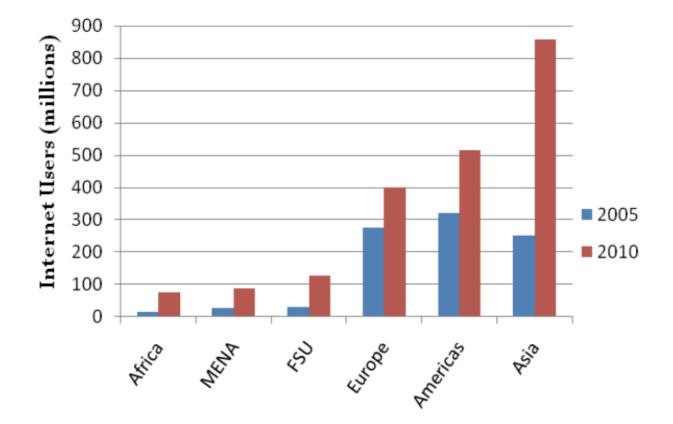

### Internet Censorship is Widespread

#### Practiced in 59 countries around the world

- Many western countries
- Several electoral democracies (e.g., S. Korea, Turkey) have significant censorship
  - YouTube blocked in Turkey for two years
  - Many North Korean sites blocked in South Korea
- Twelve countries have centralized infrastructure for monitoring/blocking

#### **Trend:** Increasing Number of Users in Non-Western Regions

#### **Internet Users by Region**

\* Source: International Telecommunications Union

## Examples of Recent Trends

- In 23 countries, a blogger or Internet user was arrested for content posted online
  - Chinese woman sent to labor camp for satirical Twitter message
  - Indonesian woman fined for an email complaining about a local hospital
- Twelve countries instituted bans on Twitter, YouTube or some other online social media service.

### Internet Censorship by Governments

Here's a list of countries who practices extreme levels of internet censorship

\* Identified by OpenNet Initiative and Reporters without borders

## Why do countries censor?

August 11, 2011, 12:21 PM

 Political stability

#### In British Riots, Social Media and Face Masks Are the Focus

Prime Minister David Cameron <u>told Parliament on Thursday</u> that if people are using social media to organize violence, as has been reported, than "we need to stop them." He asked the police to tell him if they need "new powers" to do so.

#### National security

#### Internet 'Kill Switch' Legislation Back in Play

By David Kravets 🖾 January 28, 2011 | 6:09 pm | Categories: Cyber Warfare, Cybersecurity

#### Social values

NEWS - Written by Renai LeMay on Friday, June 24, 2011 14:34 - 28 Comments

#### Voluntary ISP filter attracts global attention

This week, <u>Telstra and Optus reiterated</u> that they were still planning to start filtering their customers' traffic for a list of internet addresses provided by the Australian Communications and Media Authority which it has deemed to contain child pornography. The initiative is a stop-gap measure <u>agreed to by</u> <u>ISPs and the Federal Government in mid-2010</u> while a review is carried out into the Refused Classification category of content which the wider mandatory filter will block.

## Internet Surveillance & Censorship

### Pros:

- Protecting children (Child violence and pornography)
- Control of terrorist activities
- Crime control

## Cons:

- Violate freedom of speech
- Violate media freedom
- Limited access to extensive source of information

## Censorship Targets

### "UNHEALTY INFORMATION".

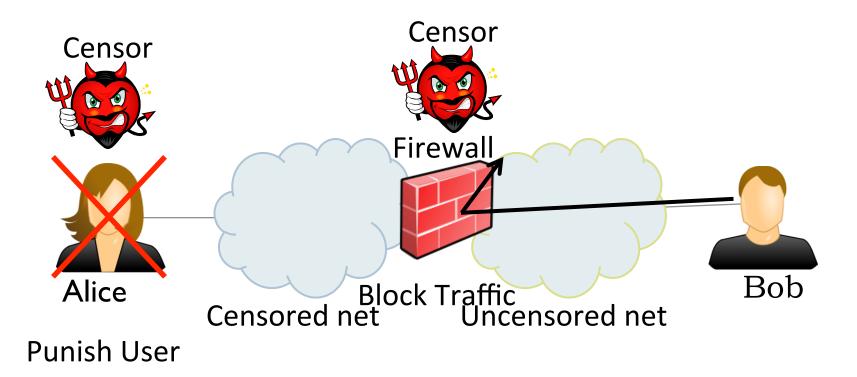

- Violent video games
- Child pornography
- Terrorism
- Etc.

But also...

- Human rights activists
- Anti-government organizations
- Anti-government criticism issues

# Censorship @ work

## **Conventional Internet Censorship**

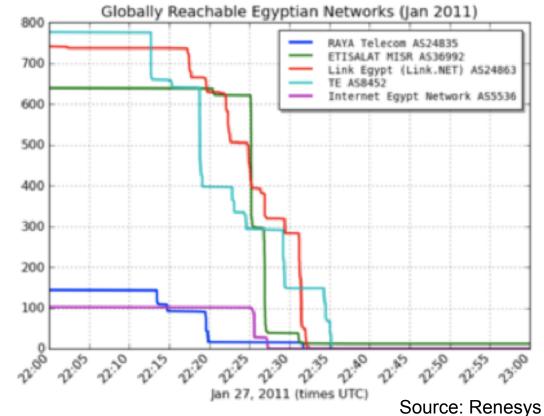

"Suppose Alice wants to get some content from Bob. If she accesses the Internet from behind a censorship firewall then the censor may monitor or block communication with Bob, and may even punish Alice for trying to communicate with Bob."

## Technical Enforcement

- IP blocking
- Domain Name System filtering & redirection
- VRL filtering
- Deep Packet filtering
- Connection reset
- Web feed blocking
- Reverse surveillance
- Self censorship

## Technical Enforcement: Blocking

- ISP acts on instructions from a judge, government official, etc.
  - Filtering: IP address, DNS
  - Keyword-based: search for keyword in URL
    - China, Iran, Tunisia have such systems in place
- Common: Use of centralized infrastructure (e.g., routing)

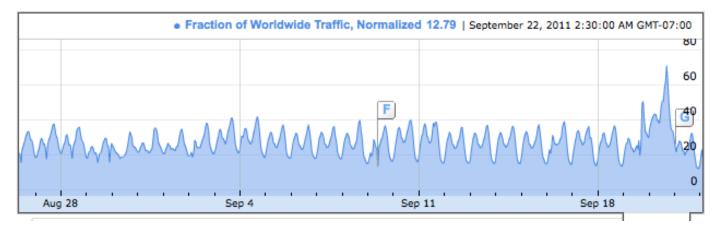

# Monitoring Internet Censorship

## Monitoring Censorship (1/3)

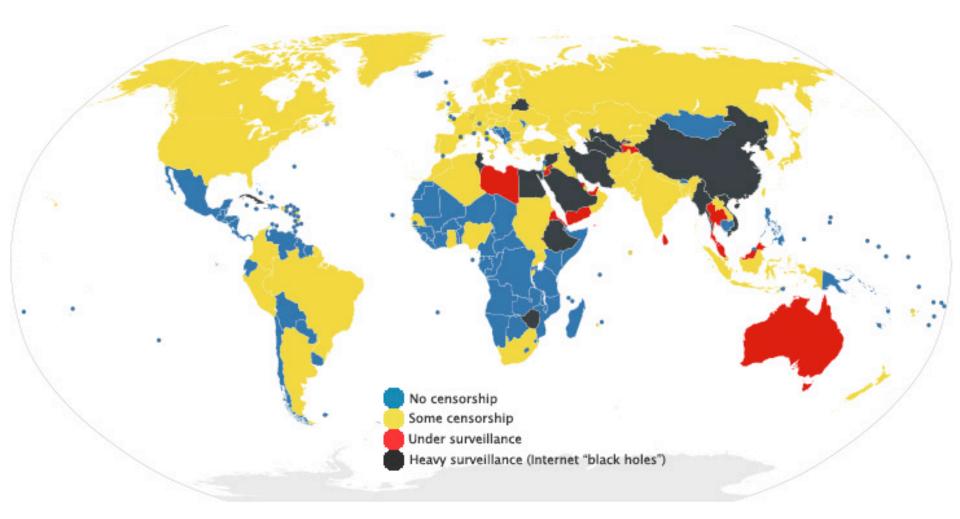

- Herdict: Crowdsourcing reports of Internet censorship
- Google Transparency Report: Monitor reachability of online services

Egypt	\$	All Products	\$
-------	----	--------------	----

All Products, Egypt Traffic Divided by Worldwide Traffic and Normalized

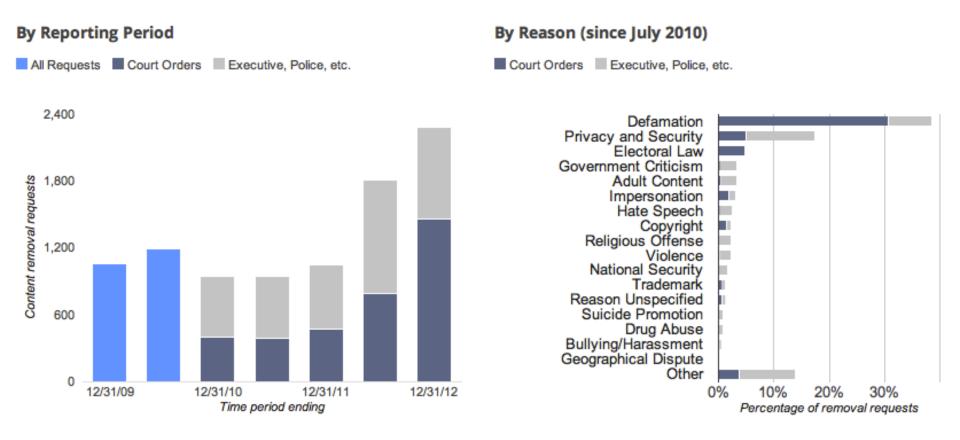

### Monitoring Censorship (2/3)

Source: http://www.thenutgraph.com/six-words-on-internet-censorship/

## Monitoring Censorship (3/3)

#### Google Transparency Report: Summary of all requests

### Monitoring Censorship: Challenges

#### "Censorship" is ill-defined

- Personalization may be confused with censorship
- Performance problems may be confused with censorship
- Measurement tools can be blocked
  - Measurements may be blocked
  - Reports may be blocked
- Measurements tough to characterize
  - Reports may be falsified
- Running the tool may be incriminating

### Problems with Current Approaches

- Biased by what users choose to report
- Lack of corroborating, open measurements
- Not general (focused only on limited services)
- Not longitudinal
- Do not cover a set of ISPs or access modes within a country
- Do not run on a diversity of hardware

- Easy to install and use: Should be easy to install and run on a variety of platforms.
- **Cross-platform:** Tests should be write once, run anywhere.
- Flexible: Should be capable of implementing a wide variety of experiments, including many from the test specifications from existing projects (e.g., OONI).
- Secure: Arbitrary remote code execution is bad.
- Extensible: Should be capable of incorporating new experiments.

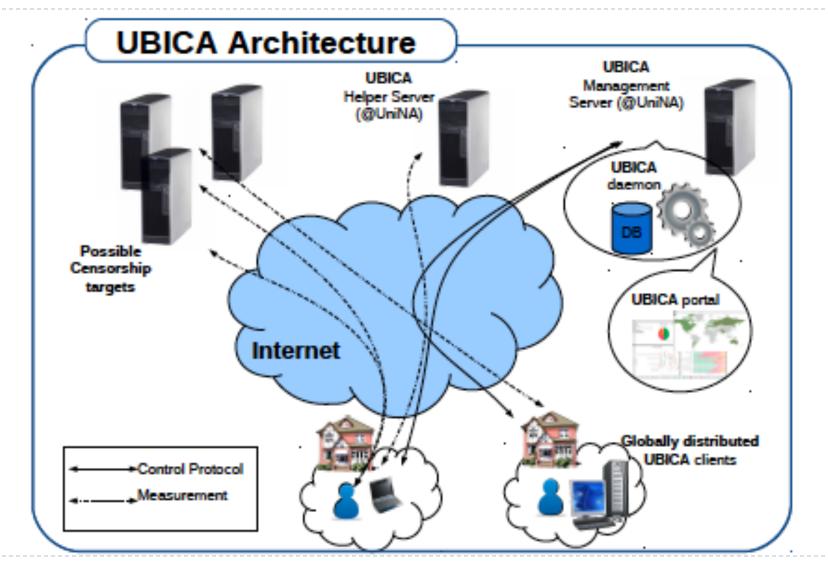

## **Censorship: our contributions**

### Contributions

- UBICA, User-based Internet Censorship Analysis
- Analysis of Country-wide Internet Outages Caused by Censorship

## UBICA

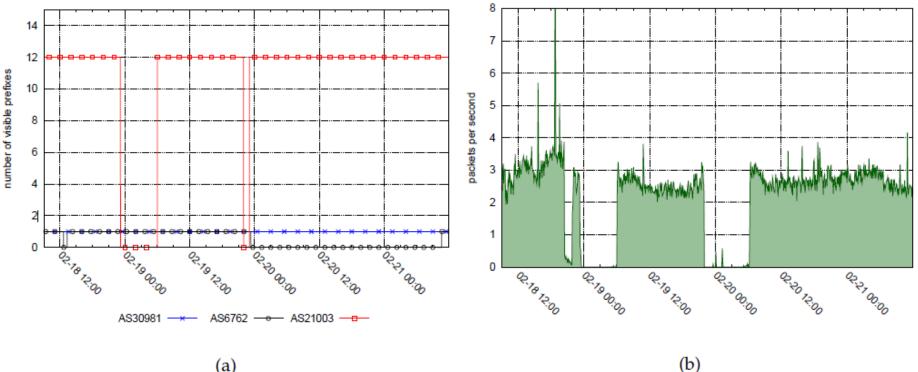

http://traffic.comics.unina.it/internetcensor.php

Detection of Country-wide Censorship Episodes

We analyzed disruptions of Internet communications in Egypt and Libya in response to civilian protests and threats of civil war, by combining BGP updates, Ark traceroutes, and darknet measurements.

34 The first two Libyan outages: (a) visibility of Libyan IPv4 prefixes in BGP; (b) unsolicited traffic to UCSD telescope from Libya.

## **Open Questions**

### Questions

- How widespread is Internet censorship?
- How do countries enforce censorship?
  - How does it evolve over time?
    - ▶ i.e. Iran
  - Does it coincide with other events?
    - ▶ i.e."Arab Spring"
- How can citizens circumvent it?
- How (else) might a government (or organization) exercise control over its citizens?

- (Self-)Censorship is not limited to China—in France, Italy, Austria, and Germany, sites such as Google, eBay, and Amazon are required to block white supremacist and nazi-related items.
- In France, one cannot buy Nazi paraphernalia from any merchant. eBay cooperates with this law by blocking all products and users linked to Nazism from their sites.
  - Is this form of censorship more acceptable than Beijing's policy of blocking "sensitive" topics? Keep in mind that buying Nazi products is completely legal in the States.

## Final Remarks

- Censor and Surveillance change continuously
- Importance of Interdisciplinary Research
  - Policy
  - Technology
  - Etc.
- Importance of Crowd-sourced approaches

## Conclusion

#### Linux Day 2013: take home message

## Linux Day 2013: take home message

As long as hackers are around...there will always be ways to bypass Internet censorship!!!

#### Here are some examples:

- Proxy websites
- Java Anon Proxy
- Psiphon
- Tor (The Onion Router)
- Sneakernets

### Looking at the future: Hackers, Unite !!!
